## Windows ePCR

### Table View Event Editing

Table View editing has had major speed improvements and visual tweaking to make it faster and more user friendly. Table View Editing allows for providers to see the timeline of the call while also editing event details in a side by side view. *This event editing workflow will become the default method of event editing for all departments in TripTix Windows with TripTix 4.1.18.1.*

The screenshot displays the Windows ePCR interface. On the left is the 'Event Timeline' table, and on the right is the 'Event Details' form.

Date / Time	Event	Menu
06/13/2020 12:01	PSAP	⚙️
06/13/2020 12:05	Dispatched	⚙️
06/13/2020 12:07	Enroute	⚙️
06/13/2020 12:09	On Location	⚙️
06/13/2020 12:13	Patient Contact	⚙️
06/13/2020 20:53	Assessment Initial	⚙️
06/13/2020 20:57	Oxygen	⚙️

The 'Event Details' form includes sections for:

- Medication:** Oxygen (6), Pertinent Negative (checked).
- Dosage:** 6 Liters Per Minute (LPM).
- Route:** Nasal Cannula.
- Response:** Improved.
- Complications:** None.
- AUTHORIZATION:** (Section header)

## Web ePCR

### Quick Events

Quick Events have been added to Web ePCR to allow unlimited groups of quick event buttons to be used by your department. From the events section: choose a group from the picklist and then select from the events, procedures, and medications to complete the events section faster than ever before.

The screenshot shows the 'Quick Events' interface in Web ePCR. It features a 'Sequence Chart' with a '+ Add Event' button and a 'Reorder' button. The interface is organized into groups:

- Group: ★ General**
  - Assessment, Oxygen, Cardiac Monitor, CPAP, Patient Contact
- Group: Adult Arrest**
  - Airway Opened, CPR (Manual), IV, Cardiac Monitor, Epinephrine
  - Oral Airway, CPR (Autopulse)
  - BVM Ventilations (via Mask), Arrive Landings
  - Hospital Report, Care Transferred to ER
- Group: Adult Airway**
  - Assessment, Oxygen, BVM Ventilations (via Mask), CPAP, Advanced Airway
  - Vitals, Blood Glucose, BVM Ventilations (via Tube), Oral Airway, Laryngoscopy
  - Procedure, Medication, Airway Opened, Nasal Airway Insertion, Intubation

## Vitals Trend Temperature

The TripTix Vitals Trend was enhanced to include temperature to assist with easily identifying febrile patients alongside other vitals.

Vitals Trend												
Time	GCS	ECG Rhythm	HR	Method	BP (MAP)	RR	Effort	SpO2	EtCO2	BGL	Pain	Temp
17:32	15	Sinus Rhythm	80	Palpated	126/88 (101)	16	Normal	99	35	125	3	100

## Clinical Data eXchange

### Recent Records/QA Filtering on Response District

Response District has been added to the Recent Records and QA Portal to allow for improved searching and QA of records by Response District.

5 ✕
6A ✕

### Device Software Version

The TripTix Run Summary has been enhanced to show the TripTix Software Version used for editing each revision of a PCR. This information can be seen by selecting Actions > Summary from Recent Records.

Revision ▼	Created Date/Time ⇅	Software Version ⇅
1 (Current Revision)	05/21/2020 16:02:11	TripTixCDX version 4.1.17.2
0	05/21/2020 15:45:42	TripTixCDX version 4.1.17.2

### eTransfer Improvements

Several enhancements were made to the way electronic transfer of records to hospitals and other third parties is handled to improve first attempt eTransfer reliability and to automate retries.
